

## HVAC

To reduce movement, reduce moisture and uphold the integrity of the building envelope, expanding polyurethane foam is an excellent way to seal HVAC penetrations in the walls, ceiling and floors of a structure.

FOAM IT GREEN® disposable foam kits provide the perfect method to accomplish this task. The self-contained, compact packages enable the user to take the foam sealant to the area in which it is used, without concern over power or pressure accessibility. The easy-to-operate kit can be installed by anyone on the crew, no special training is required.

Where allowed, foam can be used to spray onto duct work to **maintain temperature, eliminate condensation and reduce vibration.**

Choose our **Class I** (flame retarded formula) in applications where flammability is a concern.
